

FOR IMMEDIATE RELEASE:

AudioLava 1.0 – Oldies but Goodies

AudioLava prepares vinyl and cassette recordings for the digital age.

Karlsruhe, Germany, Februar 7th 2007 – Owners of old vinyl and cassette recordings can prepare their musical treasures for the digital age using AudioLava. AudioLava automatically removes noise such as tape hiss or clicks and crackle on LP records and contains filters and effects that are otherwise only found in expensive audio editing software. Even users new to audio editing can easily and in short time record and clean up old recordings. The user friendly Cleaning Wizard helps to find the best way to bring old recordings back to life and guides the user through all the steps from recording and track splitting to restoration and CD burning.

The digital emulation of phono preamplifiers makes it possible to connect ordinary record players directly to the sound card input.

AudioLava automatically splits recordings into separate tracks, which can also be edited manually. A large set of effects and filters are included, ranging from reverb and equalizer to synthesis of missing high frequency content (treble). Plug-ins in the DirectX or VST format are supported. The real time processing of the filters and effects simplifies the fine tuning of the filters and enhances the workflow. The restored recordings can be burned directly on CDs or saved as audio files on the computer in a variety of formats, including wave and mp3.

Price and Availability

AudioLava is available for \$24.90 (USD) as electronic delivery on the Acon Digital Media web site (<http://www.acondigital.com>). There is also a free 30-day trial available.

About Acon Digital Media GmbH

Acon Digital Media GmbH was founded in April 2003. The privately held company is committed to development of quality software within the field of digital media editing and offers own products such as the audio editor Acoustica as well as software development services.
